

First Grade Summer Math Work Instructions:

You will be using IXL to complete the summer math for the upcoming school year.

You should be working about 30 - 60 minutes a week over the course of the summer. Your teacher can monitor your progress as you are working on it. You will go to “Learning” and then go to “Recommendations” . Once you click on that you will find a personalized Action Plan specific to your child’s diagnostics and your child should work on those areas this summer. Please note that until the end of June there will be more than just math skills presented so just work on questions that have a pyramid (the IXL math symbol) in the lower right hand corner. If you see a picture of an open book you are answering Language Arts questions.

Good luck and work hard!
